

# RESIDENT PHYSICIAN Of the MONTH

April

## A colleague had this to say about Dr. Mandziuk :

Resident physicians of virtually all programs must perform off-service rotations. These rotations away from the familiarity of one's home service can be lonely, disorienting, and stressful. Therefore, all off-service resident physicians can appreciate a colleague who goes above and beyond for resident physicians rotating through from other programs. Jake Mandziuk is such a quintessential resident physician. He has gone the extra mile his entire residency training for resident physicians rotating through Anatomical Pathology from our program (Diagnostic Radiology). Whether by being welcoming, providing advice for the rotation, or showing interesting cases, he has been an important part of our off-service pathology rotations. Furthermore, he has had a vital role in our education longitudinally by collaborating with many of us for our radiologic-pathologic case submissions (which radiology resident physicians across Canada must submit in PGY-4), including this year where he was busy studying for the Royal College Examination.

Outside of work, Jake exemplifies a balanced lifestyle, including partaking in local arts and culture, and sharing his two beautiful cats on Instagram.

Thank you again, from the senior University of Alberta Diagnostic Radiology resident physicians. All the best at your fellowship in Pediatric Pathology at the Medical College of Wisconsin. We hope to see you back as a staff physician to welcome future generations of radiology resident physicians.

## Dr. Jake Mandziuk Anatomical Pathology University of Alberta

Life ain't easy and it flows by fast. Residency training is no different. Yet the resident physicians I have worked with over the past five years have made the process fun and rewarding. They have helped me strengthen myself and I hope I have helped them in some way as well. Thank you for being a friend and thank you for this nomination.

I have completed all my post-secondary education in Edmonton. I am finalizing my last few months in the Anatomical Pathology program and will swing Southeast to Milwaukee to complete a Fellowship in Pediatric Pathology at Children's Wisconsin starting in July. During my time here I have tried to engage in teaching as much as possible and to help others with their academic pursuits while developing my own alongside them.

Outside of work I spend my nights and weekends with friends as much as I can. I have two farm cats keeping me company. Royal Ruby and Countess Cookie. I collect life-size busts of comic book characters, enjoy accumulating weird art and dabble with guitars. I'm looking forward to finding new ways to keep life as exciting as it should be!
